Research-based professional development for educators that will change the way you teach.

Join us for Teaching All Kinds of Minds: a comprehensive three-day institute that provides an in-depth exploration of learning and learning variations. You’ll learn how the mind functions through a research-based framework of eight neurodevelopmental constructs and explore – through interactive discussions, case studies, and reflections – how an understanding of the science of learning can enhance your instructional decision-making. You’ll develop skills to identify strengths and breakdowns in student learning, link them to a student’s unique learning profile, and effectively select instructional strategies that leverage a student’s strengths and help him or her overcome barriers to learning.

Expert facilitators guide your learning experience and provide you with a wealth of strategies to take back to your classroom, including signature processes and tools that help you address the diverse learning needs in your classroom.

Participants will be able to:

- Use the neurodevelopmental framework to support students’ uniquely wired minds to create a constructive learning environment for all students
- Gain confidence and an increased sense of efficacy in selecting and applying a variety of instructional strategies to meet the learning needs of individual students and groups of students
- Develop comprehensive management plans that address student learning strengths and weaknesses
- Use a common language about learners and learning with colleagues, students, and families, which allows conversations about student learning challenges to move
